

MARK DARWIN C. VILLARTA

Application Developer | Full Stack Developer | Data Engineer

Puerto Princesa City, Palawan, Philippines | +63 910 404 9265 | elitepro318@gmail.com
GitHub: github.com/Anoobiex318 | LinkedIn: linkedin.com/in/mark-darwin-villarta-15a938207/

PROFESSIONAL SUMMARY

Software Engineer and Full Stack Developer with 9+ years of experience in software development, application support, data engineering, and enterprise system integration. Experienced in designing, developing, deploying, and maintaining scalable web applications, REST APIs, ETL/ELT pipelines, and cloud-based solutions. Strong technical background in JavaScript, TypeScript, Python, C#/.NET, PHP, SQL, Django, Flask, Next.js, MySQL, PostgreSQL, SQL Server, MongoDB, AWS, GCP, Docker, CI/CD, and Linux. Proven ability to work across the full software development lifecycle, from requirements analysis and architecture through development, testing, deployment, monitoring, and production support. Experienced in cross-functional collaboration and AI-assisted development and automation.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C#, PHP, SQL, HTML5, CSS3

Frontend Development: Next.js, JavaScript ES6+, TypeScript, HTML5, CSS3, Bootstrap

Backend Development: Python, Django, Flask, C#/.NET, PHP, Laravel, REST APIs

Databases: MySQL, PostgreSQL, Microsoft SQL Server, MongoDB

Data Engineering: ETL/ELT, Apache NiFi, Python Data Processing, Data Pipelines, Data Modeling, Medallion Architecture, Data Quality, Data Integration

Cloud & Infrastructure: AWS, Amazon EC2, Amazon S3, Google Cloud Platform (GCP), Firebase, Linux, Windows Server, VPS, QNAP, aaPanel

DevOps & CI/CD: GitHub Actions, Jenkins, GitLab CI/CD, Docker, Podman, Automated Deployment

Integration & Automation: REST APIs, API Integration, n8n, Apache NiFi, Keycloak, Workflow Automation

Development Tools: Git, GitHub, GitLab, SonarQube, Swagger/OpenAPI, Postman

Practices & Methodologies: Clean Code, Code Review, Automated Testing, Performance Optimization, Monitoring, Logging, Documentation, Agile, Scrum, Waterfall, SDLC

PROFESSIONAL EXPERIENCE

Lead Data Engineer

Palawan Group of Companies | Philippines | April 2024 – Present

- Lead the design, development, implementation, and optimization of enterprise data pipelines and ETL/ELT workflows supporting analytics, reporting, and operational systems.
- Design scalable data processing solutions using Apache NiFi, Python, databases, APIs, and cloud services.
- Implement data integration workflows across multiple enterprise data sources while maintaining data accuracy, reliability, and processing performance.
- Apply Medallion Architecture principles to organize and optimize data ingestion, transformation, and consumption layers.
- Optimize database queries, data models, and processing logic to improve pipeline performance and reduce processing latency.
- Implement data quality validation, monitoring, logging, and observability practices to improve pipeline reliability and operational support.
- Develop and maintain CI/CD pipelines for data engineering workflows, supporting controlled deployments, source-code versioning, and release management.
- Collaborate with data analysts, data scientists, software engineers, infrastructure teams, and business stakeholders to translate requirements into technical solutions.
- Integrate enterprise systems through REST APIs, databases, cloud services, and automated workflows.
- Establish development standards covering coding practices, documentation, security, testing, monitoring, and governance.
- Mentor engineers and provide technical guidance on data engineering, software development, troubleshooting, and production support.

- Utilize AI-assisted development and automation tools to improve engineering productivity, system integration, and workflow efficiency.

Software Engineer / Application Support Specialist

Palawan Group of Companies | Philippines | June 2023 – April 2025

- Designed, developed, maintained, and supported full-stack web applications used in business-critical workflows.
- Developed and maintained RESTful APIs using Python and Django, focusing on application security, reliability, scalability, and performance.
- Worked with product managers, QA engineers, DevOps teams, and business stakeholders to gather requirements and deliver software solutions.
- Developed application features across frontend, backend, database, and API integration layers.
- Designed and optimized SQL queries and database operations to improve application response times and processing efficiency.
- Implemented and maintained CI/CD pipelines using GitHub Actions and Jenkins for automated build, testing, and deployment workflows.
- Participated in application architecture and system design discussions and contributed to technical improvements.
- Conducted code reviews and promoted clean code, coding standards, maintainability, and secure development practices.
- Troubleshoot application issues, production incidents, database problems, and integration failures.
- Supported application deployment, monitoring, maintenance, and continuous improvement activities.
- Mentored junior developers and provided technical guidance on software development and troubleshooting.

Freelance Programmer / Software Developer

Independent | 2017 – Present

- Developed and maintained custom web-based information systems for businesses and nonprofit organizations.
- Built frontend interfaces using HTML, CSS, JavaScript, Bootstrap, and responsive web development techniques.
- Developed backend applications and services using PHP, Laravel, C#.NET, and database technologies.
- Designed and implemented database-driven applications using MySQL and SQL-based technologies.
- Developed custom business applications based on client requirements, including information management and workflow systems.
- Performed application testing, debugging, deployment, maintenance, and technical documentation.
- Managed application deployments across Linux and Windows environments.
- Worked directly with clients to gather requirements, troubleshoot issues, and deliver project-based software solutions.
- Applied Agile/Scrum practices including iterative development, testing, and project reviews.

KEY PROJECTS

Keycloak Migration Toolkit

Technologies: Python, Flask, Keycloak, REST APIs, Linux, CI/CD

- Developed a full-stack migration system for high-volume Keycloak roles and client migration between platform versions.
- Built backend services using Python Flask to automate migration and integration workflows.
- Integrated Keycloak APIs to manage authentication-related configurations, roles, clients, and migration processes.
- Implemented application logging, monitoring, error handling, and operational visibility.
- Deployed on on-premises Linux infrastructure with automated CI/CD pipelines.

PowerGT and Cash Optimization Project

Technologies: Apache NiFi, Python, ETL, SQL, Linux, CI/CD

- Designed and implemented ETL pipelines using Apache NiFi and Python for processing high-volume enterprise datasets.
- Applied a Medallion Architecture approach to organize data ingestion, transformation, and processing workflows.
- Developed data processing workflows to support enterprise reporting and downstream analytical requirements.
- Optimized data processing workflows and database operations to improve pipeline performance and reliability.
- Implemented structured logging, monitoring, and observability mechanisms for production data pipelines.
- Deployed data processing solutions on on-premises Linux infrastructure with automated CI/CD.

Playcourtify – Multi-Racket Sports Management Application

Technologies: Next.js, TypeScript, Firebase, GCP, CI/CD

- Developed a full-stack racket sports management application supporting tennis and pickleball court booking and user management.
- Built responsive frontend functionality using Next.js and TypeScript.
- Designed application architecture for court scheduling, booking workflows, user profiles, and data consistency.
- Designed the system to support real-time scheduling and booking operations.
- Deployed the application using Firebase Hosting and Google Cloud Platform with automated CI/CD workflows.

Postman Collection Document Generator

Technologies: Python, Flask, Postman, PDF, Markdown, Linux, CI/CD

- Developed a full-stack web application that converts Postman collections into automated technical documentation.
- Built backend functionality using Python Flask and integrated Python libraries for PDF and Markdown generation.
- Implemented file processing and document generation workflows to reduce manual API documentation effort.
- Deployed the application on on-premises Linux infrastructure with automated CI/CD pipelines.

Human Resource Management System

Technologies: PHP, Bootstrap, MySQL, Python, Windows Server, QNAP

- Developed a full-stack Human Resource Management System for employee information and document management.
- Built frontend interfaces using PHP, HTML, CSS, Bootstrap, and JavaScript.
- Developed database-driven backend functionality using PHP and MySQL.
- Implemented employee information and file management capabilities with Python-based utilities for automated file processing.
- Deployed on Windows Server infrastructure with QNAP NAS integration.

EDUCATION

Bachelor's Degree in Computer Engineering

Palawan Technological College Inc. | Puerto Princesa City, Palawan, Philippines

ADDITIONAL QUALIFICATIONS

- Strong analytical, problem-solving, troubleshooting, and systems-thinking skills.
- Strong communication and cross-functional collaboration abilities.
- Experienced in enterprise application development, production support, data engineering, and cloud technologies.
- Quick learner of emerging technologies, enterprise tools, automation platforms, and AI-assisted development solutions.
